

IN THE SPECIFICATION

Replace the section briefly describing the drawings starting at page 6, line 22, with the following:

BRIEF DESCRIPTION OF THE DRAWINGS

Figure 1 shows the response of PBMCs at different cell concentrations to an HLA class I-restricted epitope, namely influenza T cell epitope M1 58-66, following a 12-14 hour incubation.

Figure 2 shows the enumeration of IFN- γ releasing spot-forming cells (SFCs) for the ~~influenza T cell epitope M158-66~~ same epitope as used for Figure 1 following a six hour incubation.

Figure 3 shows the enumeration of IFN- γ releasing SFCs for the same epitope at different concentrations of the same epitope used for Figure 1.

Figure 4 shows the enumeration of IFN- γ releasing SFCs ~~to identify peptide epitopes~~ following stimulation for 12 hours with various peptide epitopes derived from HIV proteins.
